

Conservation Reserve Program (CRP)

CRP is a program which involves planting native grasses and forbs in areas that were previously farmed. In emergency, the land may be opened for haying and grazing. Several practices can be used to achieve permanent cover including range seeding; upland wildlife habitat seeding; windbreaks; filter strips; buffers; and more.

Purpose

- Provides field cover, reducing wind and water erosion
- Provides more natural habitat for wildlife
- Protects soil, water and wildlife resources
- Improves and preserves water quality
- Enhances forest and wetland resources

For more information on conservation practices in this area, visit your local **County Conservation District/NRCS Office**, or **Local Extension Office**

Or, call **(785) 650-1282**
